**DETAILED ACTION**

1. This is in response to the Ex Parte Quayle action filed 08/26/2009. Claims 1-9 are pending and have been considered.

*Allowance*

2. Claims 1-9 are allowed.

*Examiner's Statement of Reasons for Allowance*

The following is an examiner's statement of reasons for allowance

3. Collins (US 7,095,855) is drawn to a method for securely encoding and transmitting a message by an originating device to one of a plurality of recipient devices, said message being associated with a particular one of a plurality of application running on the originating device. Transmission is generated by using a device identifier, an application identifier and an application value, of a message value; combining the message value with one or more first secret values, said secret values being known substantially only to the originating device and one or more intended recipient device of the message, to establish a secret message value; applying the secret message value and the message to an encoding process to form a secure message block, and combining an address with a device identifier, the application identifier, the application value and the secure message block, to form a secure message for transmission which is decodable by the one or more of said intended recipient devices which thereby recover the message, the address, the device identifier, the application identifier and the application value.
4. Hohberger et al (US 2003/0059050) disclose An authentication method for authenticating an article in a device includes the steps of a) reading an identification number stored on the

article, b) reading an authentication number stored on the article, c) determining an input number based at least in part on the identification number, d) applying an authentication function to the input number to calculate an output number, e) determining that the article is authentic only if the authentication number corresponds to the output number, and f) permitting use of the article in the device if the article is authentic, and disabling use of the article in the device if the article is not authentic.

5. *The above prior art reference of record does not teach or render obvious the limitations as recited independent claims 1 and 2 as amended. The combined teaching of Collin in view Hohberger et al does not teach or suggest storing consumable state data, such as an amount of consumable remaining, or authenticating messages on the basis of such data, as is required by the claimed invention. Therefore, no combination of Collins and Hohberger would result in the claimed invention.*

Dependent claims are allowed as they depend from an allowable independent claim.

### ***Conclusion***

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
